Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: Claims 1-20 are allowable because prior art fails to disclose or suggest "selecting an old data record from the plurality of data records; and regenerating a new encryption key at a user node as a function of the previous encryption key and the old data record". An example of prior art that fails to disclose or suggest "selecting an old data record from the plurality of data records; and regenerating a new encryption key at a user node as a function of the previous encryption key and the old data record" is Guski. Guski discloses the requesting node has memory locations for storing a user ID, an application ID, a time/date, and signon key. A signon key of Guski is used as an encryption key for a DES encryption function. The DES encryption function is obtained by concatenating the time/date value with an additional value, the user ID, and application ID. The output block K produced by DES encryption function is passed through a key weakening function to produce session key. In contrast to claims, Guski discloses only one data block which is the user ID, an application ID, a time/date, and signon key, and only one portion of the block is used to produce an encryption key. Guski discloses passing the original value K through a plurality of functions, including a non-key-bit set function, a one-way function, a key-bit-select function and a randomized key-select function. The first three functions create intermediate keys from the original value K and the fourth function, operating on the third intermediate value, creates the session key. Guski discloses teaching the use of multitude of functions operating in a linear fashion on a single input value, the original value, first intermediate key, the second intermediate key, and the third intermediate key. Guski fails to disclose or suggest selecting an

old data record from the plurality of data records; and regenerating a new encryption key as a function of the previous encryption key and the old data record.
